

Method For Distributing, Integrating, and Hosting**a Software Platform****Abstract of the Disclosure**

Various methods for distributing, integrating, and hosting a software platform that may be used to extend an enterprise network to mobile devices are provided. A particular embodiment of the method includes distributing a software platform to a first enterprise and distributing the software platform to a second enterprise. The software platform is for use in connection with an enterprise computing system having a plurality of back-end software applications. The software platform includes a data modeling program allowing creation of a data model associated with at least one of the plurality of back-end applications. The software platform further includes a deployment feature allowing deployment of at least a portion of the data model to a plurality of mobile computing devices.
